Nikhil S

Backend Engineer | Java 8/17 • Spring Boot • Microservices | AI-Augmented Development | Azure Certified

Bengaluru, Karnataka · +91-7676840596 · nikhlotus@gmail.com

PROFESSIONAL SUMMARY

Backend engineer with 3 years of experience designing and shipping Java (8/17) and Spring Boot microservices, REST APIs, batch pipelines and system integrations for a large-scale enterprise fintech platform at Finastra. Builds high-reliability services where correctness, data integrity and performance matter, and uses GitHub Copilot and Claude daily to understand legacy code faster, prototype quickly and refactor safely, with every change gated by code review and regression testing. Track record of zero-defect feature delivery and modernization proposals adopted by the team. Comfortable across the full delivery lifecycle: requirements, design, build, CI/CD, release and production support in Agile-Scrum and DevOps teams. Microsoft Azure certified (AZ-900).

KEY ACHIEVEMENTS

- **~60% faster data retrieval:** designed and built from scratch a REST API that aggregates a customer's complete profile and linked accounts across distributed microservices.
- **Entire class of production errors eliminated:** added service-layer validation across 4 core transaction types.
- **3 manual processes automated:** replaced manual reporting with scheduled, automated reports.
- **AI-led modernization adopted:** proposed legacy modernization approaches, prototyped with GitHub Copilot and Claude, now being implemented by the team.
- **Quality record:** 0% defects on delivered features.

TECHNICAL SKILLS

- **Languages:** Java (8, 17), SQL
- **Frameworks:** Spring Boot, Spring Batch, Spring Security, Spring Data JPA, Hibernate
- **Architecture:** Microservices, RESTful API design, distributed systems, system integration, batch processing, fault tolerance and retry, exception handling
- **Databases:** PostgreSQL, Oracle, DB2; query optimization, data modeling, data integrity
- **AI-Assisted Development:** GitHub Copilot, Claude, prompt engineering for code, vibe coding, AI-assisted refactoring, debugging, test generation and legacy modernization
- **DevOps and Monitoring:** Git, Jenkins, CI/CD pipelines, release and change management, ELK Stack (Elasticsearch, Logstash, Kibana)
- **Cloud and Messaging:** Microsoft Azure (AZ-900); Kafka, RabbitMQ (familiar)
- **Testing and Quality:** JUnit, unit testing, functional and regression testing, code review, production incident analysis
- **Reporting:** Jasper Reports, Crystal Reports
- **Tools:** IntelliJ IDEA, Eclipse, VS Code, Spring Tool Suite, pgAdmin, SQL Workbench
- **Methodology:** Agile/Scrum, DevOps

WORK EXPERIENCE

Finastra **Aug 2023 – Jul 2026**

Microservices Developer, Product, Platform & Technology **Bengaluru**

Built and maintained backend services for the Teller, Party (customer) and Core modules of a distributed Java/Spring Boot microservices platform used by banks, working in Agile-Scrum alongside business analysts, product owners and QA.

- **AI-augmented modernization:** Used GitHub Copilot and Claude to analyze legacy components, prototype solutions and refactor at speed, then validated every change through peer review and regression testing; proposed modernization approaches that the team adopted and is now implementing.
- **API design and development:** Designed and built from scratch a REST API returning a customer's complete financial profile and all linked accounts across distributed microservices, cutting manual data retrieval time by about 60% for dependent teams.
- **Performance optimization:** Reduced response latency and improved throughput on high-traffic REST endpoints by identifying and fixing inefficient queries and processing logic in upstream and downstream integration flows.
- **Data integrity and validation:** Implemented service-layer validation for 4 core transaction types (transfer, cash deposit, cash withdrawal, cheque deposit), eliminating an entire class of invalid-reversal production errors.
- **Batch processing:** Built and extended fault-tolerant Spring Batch pipelines, with structured exception handling and retry logic, that compute and transmit end-of-day transaction totals for daily reconciliation.
- **Feature delivery:** Enhanced branch workflows (shift handovers, manager transfers, login/logout), cross-bank transfers, customer onboarding, referrals and document attachment, improving reliability and data completeness across modules.

- **Reporting automation:** Replaced 3 manual reporting processes with scheduled Jasper and Crystal reports, and supported the Crystal-to-Jasper migration with verified output parity.
- **Production support:** Diagnosed and resolved defects across three modules using ELK log analysis under incident and change-management processes, contributing to a sustained reduction in open backlog.
- **Engineering quality:** Reviewed peers' code in Git-based workflows to maintain consistent standards; clarified ambiguous requirements early to prevent rework; wrote JUnit unit tests and supported functional and regression test cycles and CI/CD releases.
- **SQL development:** Wrote and tuned queries across PostgreSQL, Oracle and DB2 for feature development, data validation and debugging.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900), 2023
- Spring Security Core: Beginner to Guru, Udemy, 2023
- Master Spring Framework, Spring Boot, REST, JPA, Hibernate, Udemy, 2023
- Research paper published: E-Learning App for Kids, MAT Journals, 2022

EDUCATION

Bachelor of Engineering, Computer Science **2018 – 2022**
Sir M. Visvesvaraya Institute of Technology, Bengaluru · CGPA 7.72 / 10

ACADEMIC PROJECTS

- **E-Learning App for Kids:** Flutter, Dart, MongoDB; published in MAT Journals, 2022
- **Student Database System:** Java, Spring Boot, JPA
- **Hospital Management System:** PHP, MongoDB
- **Bank Management System:** C
- **Ludo Game:** Java, Android Studio
